

Low-voltage cable tray installation in Latvia

Summary of Content

Low-voltage cable trays in Latvia are available in various materials and designs, with installation options for under-floor, overhead, and industrial applications, supported by local suppliers and international manufacturers.

Types and Materials

Low-voltage cable trays are typically made from galvanized steel, stainless steel, aluminum, or fiberglass, offering corrosion resistance and durability for indoor and outdoor applications . Common designs include:

- Perforated trays: Promote airflow, prevent overheating, and reduce cable insulation damage .
- Cable ladders: Suitable for heavy-duty installations and long cable runs.
- Channel trays and raceways: Ideal for under-floor or enclosed installations, providing a modular and tamper-proof solution .
- Powder-coated trays: Used for indoor areas requiring aesthetic finishes and additional protection .

Installation Considerations

- Support and spacing: Trays should be mounted on walls, ceilings, or under raised floors with proper brackets and hangers, maintaining manufacturer-recommended spacing to prevent sagging .
