

Malta Corrugated Conduit Fiber Optic Fixation

Summary of Content

Corrugated conduits in Malta provide flexible, durable protection for fiber optic cables, with specialized accessories for secure fixation and installation.

Types of Corrugated Conduits

Corrugated conduits, often made from HDPE or polyethylene, are widely used for fiber optic installations due to their flexibility, durability, and ability to lay flat in ducts, reducing memory effects during installation . They are available in ribbed, corrugated, and smooth-walled constructions, suitable for both underground and overhead applications . Corrugated innerducts are particularly advantageous for multi-cable installations, as they allow easier pulling and reduce tension on the fiber optic cables .

Installation and Fixation

Proper installation involves several key steps:

- **Innerduct Preparation:** Corrugated innerducts should be sized correctly to maintain an optimal fill ratio, minimizing pulling tension .
- **Slack Management:** Extra slack should be planned at manholes to accommodate innerduct stretch and maintain the minimum bend radius of the fiber optic cable .
- **Manhole Connectors:** Specialized connectors with EPDM or PE bodies, PP caps, and fixing covers secure the innerduct at junctions and manholes, ensuring stability and protection .
