

Meter connection method in distribution box

Summary of Content

The main meter connection to a distribution box involves connecting the service entrance cables from the utility meter to the main circuit breaker, then distributing power through busbars and individual circuit breakers to sub-circuits, ensuring proper grounding and safety devices are in place.

Overview of Components

- Energy Meter: Measures electricity consumption and serves as the entry point for the building's electrical supply .
- Main Disconnect Switch / Main Circuit Breaker: Provides a safety mechanism to completely disconnect power during maintenance or emergencies .
- Distribution Board (DB): Contains protective devices such as MCBs (Miniature Circuit Breakers), RCDs (Residual Current Devices), and busbars to distribute electricity to sub-circuits .
- Busbars: Conductors that distribute power from the main breaker to individual circuit breakers .
- Grounding / Earthing: Ensures safety by preventing electrical shocks and protecting equipment .

Step-by-Step Connection Method

- Power Off: Ensure the main supply from the utility is turned off before starting any wiring .
