

Mexican Brand Power Distribution Box Materials

Summary of Content

Mexican power distribution boxes are commonly made from cold-rolled steel, stainless steel, and high-impact plastics, offering durability, corrosion resistance, and waterproofing for industrial and outdoor applications.

Metal Distribution Boxes

Metal boxes are typically constructed from cold-rolled steel or stainless steel, providing strength, durability, and corrosion resistance. These materials are suitable for harsh industrial environments, offering waterproof, dustproof, and heat-dissipation properties. They are often used in industrial automation, electrical control, and other demanding applications, ensuring safe operation of internal equipment. Cold-rolled steel is favored for its structural integrity, while stainless steel adds enhanced corrosion protection for outdoor or humid conditions.

Plastic Distribution Boxes

Plastic boxes are made from high-quality, impact-resistant plastics with IP66/IP67 protection ratings, making them waterproof, dustproof, and corrosion-resistant. These boxes are lightweight, electrically insulating, and easy to install, making them ideal for outdoor, transportation, industrial parks, and construction sites. The plastic material ensures safety for internal sockets and components while maintaining durability under environmental stress.
