

Mexico Three-Year Warranty Single-Fiber Bidirectional PAM4

Summary of Content

Single-fiber bidirectional (Bidi) PAM4 transceivers enable 100G+ connectivity over a single strand of fiber, supporting long reach, industrial temperatures, and simplified deployment, often backed by a three-year warranty.

Overview

Single-fiber Bidi PAM4 transceivers use Pulse Amplitude Modulation with 4 levels (PAM4) to transmit high-speed data over a single optical fiber, effectively doubling the capacity of existing fiber infrastructure without laying additional fiber. These transceivers are commonly available in QSFP28 100G Bidi form factors, supporting single lambda operation with upstream and downstream wavelengths (e.g., 1291/1311nm or 1271/1331nm) for point-to-point links .

Key Features

- **High-Speed Connectivity:** Achieve 100G per fiber using PAM4 modulation, with some solutions supporting up to 200G or 400G using multi-lane or twin-port configurations .
- **Reach Options:** Typical single-mode fiber reach ranges from 10 km to 70 km, depending on the wavelength and transceiver type. Industrial-grade models operate from -40°C to +85°C, while standard models cover 0°C to 70°C .
- **Compatibility:** Fully tested with popular OEM switches and routers, ensuring plug-and-play deployment in data centers and service provider networks .
