

Model of explosion-proof distribution box in China and Africa

Summary of Content

Explosion-proof distribution boxes from China are available in various materials and standards, suitable for hazardous environments in both China and Africa.

Types and Materials

Explosion-proof distribution boxes are designed for flammable gas and dust environments, including petrochemical plants, offshore platforms, chemical, pharmaceutical, coal, and smelting industries . Common types include:

- Explosion-proof lighting distribution boxes
 - Explosion-proof power distribution boxes
 - Explosion-proof anti-corrosion distribution boxes
- Materials used include engineering plastics (polycarbonate, glass fiber reinforced resin), aluminum alloy, and stainless steel. Plastic boxes offer excellent corrosion resistance, lightweight design (30%-50% lighter than metal), and cost-effectiveness, making them ideal for harsh chemical or marine environments . Aluminum and stainless steel provide durability but may require surface treatment or higher costs.

Standards and Compliance

For international use, especially in Africa, it is crucial to select boxes compliant with global and regional standards:

- ATEX (Europe) and IECEx (international) for explosive atmospheres
- CNEX (China) aligns with IECEx for local compliance
