

Model of temporary power distribution box for construction site

Summary of Content

Temporary power distribution boxes, also known as spider boxes, are portable electrical hubs designed to safely distribute power on construction sites, available in single-phase and three-phase models with various amperage ratings.

Overview

Temporary power distribution boxes are essential for construction sites where permanent electrical infrastructure is unavailable. They provide a safe, flexible, and mobile solution for powering tools, machinery, lighting, and site facilities. These units are designed to withstand harsh conditions such as rain, dust, temperature fluctuations, and frequent relocation .

Common Models and Specifications

- **Single-Phase Boxes (120/240V):** Suitable for smaller tools and light-duty equipment. Often rated at 16A or 32A, ideal for localized zones or temporary setups .
- **Three-Phase Boxes (120/208V or 277/480V):** Designed for heavy-duty machinery and larger site operations. Ratings can range from 32A to 400A, depending on site demand .
- **Power Capacity:** Modern units can deliver up to 3.8kW or more, significantly higher than standard power strips, with multiple circuits and industrial-grade connectors .
- **Construction:** Typically made from aluminum or stainless steel, resistant to impact and environmental exposure, with weatherproof covers and grounding protection .
