

Morocco Unicom Fiber Optic Router

Summary of Content

Uni Fiber, a joint venture by Maroc Telecom and Inwi, provides fiber-to-the-home (FTTH) services in Morocco, with routers supplied as part of the service package.

Overview of Uni Fiber

Uni Fiber is a joint venture between Maroc Telecom and Inwi aimed at accelerating the deployment of fiber-optic internet across Morocco. The company focuses on building the physical infrastructure necessary for FTTH services, targeting one million fiber connections within two years and three million within five years . This initiative is part of a broader effort to modernize Morocco's digital connectivity and support high-speed internet and 5G networks.

Router and Equipment

While specific router models are not publicly listed, the fiber-optic routers are typically provided by the service operator (Maroc Telecom or Inwi) as part of the subscription. The equipment remains the property of the provider, and customers are required to return it if the service is canceled . These routers are designed to support high-speed FTTH connections, enabling multiple devices to connect simultaneously for streaming, gaming, and teleworking.
