

New Active Optical Equipment

Summary of Content

The landed price of new active optical equipment typically ranges from \$5,000 to \$75,000 plus shipping, insurance, and import duties, depending on the type, brand, and destination.

Base Equipment Cost

New ophthalmology and optical devices, such as slit lamps, autorefractors, keratometers, and optical coherence tomography (OCT) systems, generally cost \$5,000 to \$75,000 depending on complexity and advanced features. High-end models with enhanced imaging or specialized functions are at the upper end of this range.

Components of Landed Cost

The landed cost includes all expenses from the supplier's dock to your warehouse :

- **Product Cost:** The invoice price of the equipment, which may vary by brand (Zeiss, Topcon, Nidek, Essilor) and model .
- **International Shipping:** Ocean freight (LCL/FCL) typically ranges from \$3,000–\$10,000 for a \$50,000 shipment; air freight is faster but more expensive (\$4–\$10 per kg), and express courier can cost \$20–\$80 per kg .
- **Cargo Insurance:** Usually 0.3–1% of total value to protect against loss or damage during transit .
- **Import Duties and Taxes:** Includes customs duties, VAT/GST, and any applicable trade tariffs. Rates vary by country and product classification .
