

Nordic Cable Tray Coating Equipment

Overview

ECC 702 coating systems provide precise process control for applying various powders, including talcs and superabsorbent powders (SAPs), for cable coating applications. Cable trays has an overall mission: to organize cables. In order to successfully meet the market's demands, high requirements and adaptations to various industries, a broad and well-thought-out range is required. Nordic Wire Tray's cable laying system consists of wire trays sold under the X-Tray. Complete cable management systems for all industries. Steel coated with a hybrid epoxy-polyester resin. The steel is covered with powder resin and then a polymerization is done at a temperature between 185-190°C for. Prevents the growth of zinc whiskers that could lead to short circuits. The smooth powder coated finish minimizes the potential of corrosion and zinc. See More: Comprehensive Guide to Hot-Dip Galvanize Cable Trays What is EG?

A thin layer of zinc gets applied to steel using electricity (electroplating). Process: Degreasing → Pickling → Electroplating → Passivation (blue/white/color chromate) → Drying.
