

Nordic FTTH Fiber Optic Patch Cord

Summary of Content

Nordic FTTH fiber optic patch cords are high-quality, bend-insensitive single-mode or multi-mode cables designed for ultra-fast, reliable home and office broadband connections.

Overview

FTTH (Fiber-to-the-Home) patch cords are used to connect optical network terminals, routers, and other fiber devices, ensuring stable, high-speed data transmission in residential or office environments . Nordic FTTH patch cords are typically designed to meet European standards, offering OS2 single-mode fibers with G.657.A1 or A2 bend-insensitive variants, which allow tight bends without signal loss, ideal for navigating narrow conduits, corners, or underfloor ducts .

Key Features

- Fiber Type: Single-mode (OS2, G.657.A1/A2) for long-distance, high-speed transmission; multi-mode options (OM1-OM5) for shorter distances .
- Bend Insensitivity: G.657 fibers tolerate tight bends (7.5–10 mm radius), reducing signal degradation in complex installations .
- Durability: Some Nordic patch cords feature double-armored or tight-buffered designs, with Kevlar or stainless-steel reinforcement for mechanical protection .
- Connectors: Available with various connectors (LC, SC, ST, FC) to match network equipment .
- Jacket Material: PVC or LSZH jackets for indoor or outdoor use, with flexible 3mm construction for easy installation .
