

Norwegian Metal Cable Tray Specifications and Models

Summary of Content

Norwegian metal cable trays are available in a wide range of materials, sizes, and configurations, designed for industrial, marine, and infrastructure applications, with leading suppliers including Ogleand System and Nordic Wire Tray.

Materials and Construction

Norwegian cable trays are typically made from stainless steel, hot-dip galvanized steel, aluminum, and fiberglass composites (FRP/GRP), providing durability for both indoor and outdoor environments, including offshore and marine applications. These materials ensure resistance to corrosion, mechanical stress, and environmental factors, making them suitable for heavy-duty industrial use.

Tray Types and Models

- Ladder Cable Trays – Feature horizontal rungs connecting side rails, ideal for supporting heavy power cables and allowing excellent ventilation.
- Wire Mesh Trays – Constructed from wire grids, suitable for data and communication cables, offering flexibility and easy cutting or bending on-site.
- Solid or Perforated Trays – Provide protection against dust and debris while maintaining airflow to prevent overheating.
- Single Rail Trays – Consist of a single support rail with attachments for cable support, often used in compact installations.
- NATO-Type and Distribution Trays – Specialized models for military or industrial distribution systems, available from suppliers like Eurostrut.
