

On-site pricing for fiber optic splice boxes

Summary of Content

Fiber optic splice boxes typically range from \$20 to \$200 per unit depending on type, capacity, and features.

Pricing Overview

Fiber optic splice boxes vary widely in price based on fiber capacity, enclosure type, and environmental protection. Standard small-capacity boxes (12–24 ports) for indoor or simple outdoor use can cost \$20–\$50 per unit, while larger, high-density closures (48–512 ports) designed for outdoor, waterproof, or modular applications can range from \$100–\$200 or more per unit. Bulk orders or high-volume projects may reduce per-unit costs.

Factors Affecting Cost

- **Fiber Capacity:** Boxes supporting higher fiber counts (e.g., 72–576 fibers) are more expensive due to additional splice trays and internal organization features.
- **Type of Enclosure:** Inline, dome, or distribution boxes differ in design and installation complexity. Dome closures and underground-rated boxes often cost more due to durability and waterproofing.
- **Material and Durability:** Weather-resistant, UV-protected, and impact-resistant materials increase the price, especially for outdoor deployments.
- **Installation and Accessories:** Some suppliers include splice trays, adapters, and mounting hardware, while others charge separately. Labor for splicing and installation can add \$50–\$150 per fusion splice point, depending on project size and site conditions.
