

Optical Distribution Box Number

Summary of Content

The optical distribution box number is typically found on a label or engraved plate on the exterior of the box, or in the network operator's documentation.

Physical Labeling

Most optical distribution boxes (ODBs) are marked with a unique identifier on the outside of the enclosure. This label may be:

- A printed sticker or barcode showing the box number.
- An engraved or embossed plate on the box surface.
- Sometimes included alongside the manufacturer's model number (e.g., ODB-8, ODB-24, ODB-48) for reference . The number is usually placed in a visible location near the front or side of the box to allow technicians to quickly identify it during installation or maintenance.

Network Documentation

In addition to physical labeling, the box number is recorded in the service provider's network documentation. This includes:

- Fiber network maps showing the location of each ODB.
- Splice and patch records for fiber-to-the-home (FTTH), fiber-to-the-building (FTTB), or fiber-to-the-curb (FTTC) deployments .
- Asset management systems used by telecom operators to track each box and its associated fibers.

Tips for Finding the Number
