

Optical Miniature Program-Controlled Switch

Overview

This kind of micro mechanical optic switch is driven by a relay to control the prism to turn, thus switch the path, with only few channels such as 2, and 8. It is normally used for OLP (Optical Fiber Line Protection) system. This mini switch can be seen as an updated version of the regular. High-Speed Protection for Your Optical Network: Compact, Reliable, and Low Loss. High Reliability: Tested for over 30 million switching cycles (≥ 3 times. The MEMS Ultra-Mini Series Fiber Optical Switch uses a patented thermal activated micro-mirror, moving-in and-out optical paths, uniquely featuring high extinction, high stability over a wide temperature range, and small size. 10ms), capable of rapidly directing light beams with minimal latency. Mini 1x8 Mechanical Optical Switch GEZHI Series Mini 1x8 fiber optic switch connects optical channels by redirecting an incoming optical signal into a selected output fiber.
