

Optical Module Manufacturer Prices

Summary of Content

The average price of optical modules ranges from \$150 to \$200 per unit, with variations depending on speed, form factor, and vendor.

Current Market Pricing

In 2024, global sales of optical modules were estimated at 88-117 million units, with an average price range of \$150-200 per unit . Prices vary significantly based on data rate, form factor, and technology:

- SFP/SFP+ modules (10G-25G) are generally at the lower end of the price spectrum.
- QSFP28/OSFP modules (100G-400G) and coherent optics for metro and long-haul networks command higher prices due to advanced photonics integration .
- Emerging 1.6T optical engines and high-speed AI-focused modules are priced at a premium due to cutting-edge silicon photonics and co-packaged optics technology .

Factors Influencing Prices

- Data Center and Cloud Demand: Hyperscale operators like AWS, Microsoft Azure, and Google Cloud are driving demand for high-speed modules, which increases unit prices for 400G-800G modules .
- Supply Chain Constraints: Lead times exceeding 12 weeks and semiconductor shortages have historically caused price fluctuations .
- Technological Advancements: Integration of silicon photonics, pluggable coherent optics, and higher-density packaging reduces costs over time but initially increases prices for new-generation modules .
