

Optical Module with the Largest Shipment Volume

Summary of Content

800G optical modules are currently the optical modules with the largest shipment volume, expected to exceed 40 million units in 2026.

Market Overview

The 800G optical module segment has experienced explosive growth due to AI-driven data center demand and hyperscale cloud infrastructure expansion. By 2026, shipment volumes are projected to surpass 40 million units, with North America leading demand, followed by China. Major purchasers include Meta, Google, Microsoft, and Amazon, with Meta alone accounting for 10-12 million units and Google and Microsoft collectively around 12 million units .

Comparison with 1.6T Modules

While 1.6T optical modules are entering commercialization in 2026, their global demand is expected to reach 8.6-20 million units, significantly lower than 800G volumes. Nvidia is the primary driver for 1.6T adoption, with over 5 million units projected for 2026 . Initial 1.6T shipments are constrained by production capacity and technological maturity, whereas 800G modules are already widely deployed and dominate the market .
