

Outdoor Constant Temperature Cabinet NEMA4X

Overview

Our NEMA / UL Type 4X cooling units are designed for corrosive environments such as the food processing industry. They are supplied in stainless steel housing AISI 304 (V2A) or AISI 316 (V4A). With cooling capacities of 650 W up to 6000 W, they cover a wide range of industrial. What is the real difference between NEMA 4 and NEMA 4X for a cooling project?

The primary difference is corrosion resistance. NEMA 4X (IP66) Cabinet Coolers (dust-tight, oil-tight, splash resistant, corrosion resistant, indoor/outdoor service) incorporate a low pressure relief valve which closes and seals when the cooler is not operating to maintain the integrity of a NEMA 4X enclosure. Crafted from DDB Unlimited's proprietary AlumiFlex® material, much lighter than steel yet strong enough to support the heaviest telecommunications equipment. The operating temperature of -40°C to 55°C, an IP56 protection class, integrated condensate evaporation, enclosure heater and aluminium filter, make these cooling units suitable for.
