

Outdoor Waterproof Distribution Box Design

Overview

Low voltage distribution box outdoor use requires IP65 or NEMA 4X ratings, corrosion-resistant materials, and proper sealing for lasting weather protection. Key design points include high-quality materials like ABS plastic, aluminum, and stainless steel that resist corrosion and UV. For most outdoor applications, IP65 enclosures provide an excellent balance between protection and practicality. They protect against dust and water jets, making them suitable for rain-exposed and industrial environments. However, applications involving immersion or extreme wash-down may require. Outdoor power distribution box equipment operates in harsh year-round environments, prone to insulation aging, water ingress and short-circuit faults that jeopardize stable power supply. Built with durable materials, CE & ROHS certified. □□ Specification Insight: NEC 312.
