

Performance of Layer 3 Core Switches

Overview

Sitting at the top of the hierarchical model, core switches interconnect distribution layer switches and provide high-speed data transfer across network segments. Engineered to aggregate massive volumes of data from distribution switches, it provides ultra-low latency and maximum throughput to ensure uninterrupted routing and packet. A core switch is the backbone of a large-scale network, designed to handle massive volumes of traffic with ultra-low latency and maximum reliability. MikroTik Managed L3 Network Switch The MikroTik CRS317-1G-16S+RM Managed Layer 3 Network Switch. We've tested and reviewed the top-performing models on the market—focusing on speed, features, scalability, and real-world reliability. In the realm of system networking, three key types of switches are frequently mentioned: access switches, aggregation switches, and core switches. Also depending on your needs, the switch might not have some features you desire. 03-02-2021 01:48 AM Where you might run into performance.
