

Plastic distribution box with 12 circuits

Summary of Content

A 12-circuit plastic distribution box is a compact, durable enclosure designed to safely organize and protect multiple electrical circuits in residential, commercial, or industrial settings.

Key Features

Material and Durability: Most 12-way distribution boxes are made from high-quality, fire-resistant plastic such as PC/ABS, providing excellent insulation and impact resistance. This ensures long-lasting durability and protection against electrical faults, overloads, and short circuits . **Circuit Capacity:** These boxes accommodate 12 individual circuits, allowing for organized wiring and easy expansion of electrical systems . **Waterproof and Outdoor Use:** Some models, like the Sindr HT-12, feature a waterproof design (IP65-IP67 ratings), making them suitable for outdoor installations. This protects electrical components from water, dust, and environmental factors . **Transparent Cover:** Many boxes include a clear or transparent cover, enabling quick inspection of circuits without opening the enclosure, which enhances safety and convenience . **DIN Rail Compatibility:** Most 12-way boxes support DIN rails, allowing modular installation of miniature circuit breakers (MCBs) and other components, simplifying maintenance and future upgrades . **Compact and Space-Saving:** These boxes are designed to be compact, saving space while providing full functionality for multiple circuits. They are suitable for homes, offices, factories, and other installations where space efficiency is important . **Installation and Maintenance:** Easy to install on walls or panels, these boxes are suitable for both professional electricians and DIY enthusiasts. The robust plastic construction ensures minimal maintenance over time .
