

Polishing the square head of the pigtail

Overview

The typical process involves stripping the fiber coating, inserting and securing the fiber in a ferrule with adhesive, and then polishing the end using a series of films with progressively finer grits. Finally, the endface quality is checked, for example with a fiber microscope. It provides an expert-curated supplier directory, buyer-focused technical background information, and structured selection criteria to support professional procurement decisions. When is Fiber Polishing Required?

When is y termination technique. Moleroda have two sizes as standard for tapers. 12mm and 16mm internal diameter. With more than 20 years of combined experiences in the area of optical polishing and high reliability optical processes, we have been able to meet very tough. Prepare Tools and Consumables: Polish Machine, Polish Pad, Polish Film, Polish Jig, Polish Oil, Fiber Cutting Pen 1. After five minutes, remove the ferrule from the board, hold the connector in.
