

Price Standard Table for Fiber Optic Cable Laying

Summary of Content

Fiber optic cable laying costs typically range from \$2 to \$8.50 per linear foot, with total project costs varying from \$8,000 to over \$60,000 depending on fiber type, installation method, and site complexity.

Key Cost Components

Material Costs: Fiber optic cable prices vary by type and strand count. Single-mode fiber generally costs \$0.10–\$0.50 per foot, while multimode fiber ranges from \$0.30–\$1.00 per foot. High-strand-count cables, armored cables, or pre-terminated assemblies increase costs, with some enterprise-grade cables reaching \$6 per foot for 288-strand backbones. Indoor simplex or duplex cables are cheaper (\$0.05–\$0.30 per meter), whereas outdoor, armored, or aerial cables can cost \$0.40–\$1.50 per meter depending on environmental ratings and protective jackets . **Labor Costs:** Labor is often the largest expense, influenced by crew size, skill level, and regional wage rates. Complex installations—such as splicing, aerial work, or constrained urban environments—require specialized crews and longer hours, increasing costs. Labor rates vary significantly by region and union rules . **Installation Method:** Underground trenching is more expensive than aerial deployment due to excavation, conduit, backfill, and pavement restoration. Typical per-foot costs for trenching range from \$2.50–\$8.50, while aerial installations can reduce costs by 20–40% . Trench depth, soil conditions, and existing utilities also affect pricing. **Permitting and Regulatory Fees:** Local permits, wayleaves, and inspections can add both direct fees and indirect delays. Urban areas often incur higher costs due to traffic control, restoration requirements, and coordination with utility providers .
