

Price of cable tray expansion joint

Summary of Content

Cable tray expansion joints typically cost between \$50 and \$300 per unit, depending on material, size, and manufacturer.

Cost Factors

The price of a cable tray expansion joint varies based on several factors:

- **Material:** Steel expansion joints are generally less expensive, while stainless steel or aluminum options cost more due to corrosion resistance and durability. Fiberglass or specialty materials may further increase the price.
- **Size and Type:** Larger joints or those designed for heavy-duty cable trays are more expensive. The type of joint (sliding, telescopic, or flexible) also affects cost.
- **Manufacturer and Supplier:** Brand reputation, quality standards, and supplier margins influence pricing. Custom or project-specific joints may carry a premium.
- **Quantity:** Bulk orders can reduce the per-unit cost, while single units may be more expensive.
- **Installation Considerations:** While the joint itself has a cost, installation may require additional hardware, labor, and supports, which can add to the total project expense.

Typical Price Range

Based on industry experience and related expansion joint pricing:

- Standard steel joints: \$50-\$150 per unit
- Stainless steel or aluminum joints: \$150-\$300 per unit
