

Price of fiber optic cable manhole

Summary of Content

Fiber optic manholes typically range from \$500 to \$5,000 per unit, depending on size, material, and features.

Pricing Overview

The cost of a fiber optic manhole varies widely based on material, size, and functionality. Standard precast concrete or composite manholes (SMC or FRP) generally start around \$500 to \$1,500 for smaller units suitable for residential or light commercial installations, while larger, heavy-duty manholes for urban or industrial applications can reach \$3,000 to \$5,000 or more per unit. Smart manholes with IoT-enabled monitoring, anti-theft features, or gel-sealed enclosures may further increase the price due to advanced technology integration.

Factors Affecting Cost

- **Material:** Concrete is typically less expensive, while SMC and FRP composites offer durability, corrosion resistance, and lighter weight, often commanding higher prices.
- **Size and Load Rating:** Manholes designed for roadways must meet Class D (90 kN) load-bearing standards, which increases cost.
- **Installation Complexity:** Underground installation, drainage provisions, and pre-installed accessories (racks, pull irons, term-a-ducts) can add to the total cost.
- **Bulk Orders:** Large-scale purchases (e.g., 10,000+ units) can reduce per-unit costs by up to 90%, making bulk procurement more economical.
- **Compliance and Certification:** Meeting standards such as EN 124, ASTM C148, IEC 61238, IP68 rating, and UL/CSA certification may influence pricing.
