

Price of tin-plated busbar trunking

Summary of Content

The price of tin-plated busbar trunking varies widely depending on material, size, and fabrication, typically ranging from \$10 to \$50 per meter for standard copper or aluminum systems.

Pricing Overview

Tin-plated busbar trunking systems are generally made from copper or aluminum and coated with a thin layer of tin to prevent oxidation and corrosion, enhancing conductivity and durability. The raw material cost is a major factor: copper is more expensive than aluminum due to higher conductivity and market pricing, while aluminum requires larger cross-sections for equivalent electrical performance. Other factors affecting price include:

- Busbar dimensions and shape: Larger cross-sections or custom shapes increase material usage and cost.
- Plating thickness: Thicker tin coatings provide better corrosion resistance but add to manufacturing costs.
- Fabrication complexity: Bending, punching, insulation, and assembly labor can significantly influence the final price.
- Quantity and order size: Bulk orders often reduce per-meter cost, while small or custom orders are more expensive.
- Additional features: Insulation, supports, and verification testing can increase the installed system cost.

Typical Price Range
