

Recommended Stainless Steel Cable Trays in Western Europe

Summary of Content

Wire mesh and ladder-style stainless steel cable trays, particularly in grades 304 and 316, are among the best-selling types in Western Europe due to their durability, corrosion resistance, and versatility in industrial and food-processing applications.

Popular Types

1. **Stainless Steel Wire Basket Cable Trays** Wire basket trays are lightweight, cost-effective, and highly versatile. They are widely used in the food, beverage, and pharmaceutical industries because they allow excellent ventilation and easy cleaning. Electrix reports that their stainless steel wire basket trays, available in 4 mm and 5 mm wire diameters, are regularly specified by companies like Mars, Coca-Cola, and Pfizer, indicating strong market demand in Western Europe. Optional lids and a wide range of lengths make them adaptable for various installations . 2. **Ladder-Style Stainless Steel Cable Trays** Ladder trays are preferred for heavy-duty industrial applications where large power or instrumentation cables need support. They provide excellent strength, ventilation, and long-term durability. Spina Group highlights that ladder trays in stainless steel, often in standard widths like 300 mm, are popular for industrial plants and infrastructure projects, with optional covers for outdoor or harsh environments . 3. **Perforated and Closed-Bottom Trays** Perforated trays offer good ventilation while maintaining cable protection, whereas closed-bottom trays are ideal for environments requiring cable isolation or protection from dust and moisture. These types are commonly used in chemical plants, laboratories, and outdoor installations .
