

Recommended tools for drilling holes in cable trays

Summary of Content

Power drills, flexible cable auger bits, and hydraulic hole punchers are the primary tools for efficiently drilling holes in cable trays.

Standard Power Drills

A cordless or corded power drill is the most common tool for creating holes in cable trays, especially for metal or PVC trays. For metal trays, use a high-speed steel (HSS) or cobalt drill bit matched to the hole diameter required for mounting brackets or cable glands. For wood or composite surfaces, standard twist or auger bits are suitable. Ensure the drill has variable speed control to prevent overheating and maintain precision .

Flexible Cable Auger Bits

For long or hard-to-reach runs, flexible cable auger bits allow drilling through walls, ceilings, or between floors. These bits are typically 54-72 inches long and feature a screw-tip or fish-eye design to guide cables through the drilled holes. They are ideal for small wire systems, including computer, security, and phone cables, and can be used with standard drills .
