

Relay protection cabinet DC power distribution unit fixed

Overview

This DC power distribution cabinet is designed for use in power systems of power plants, hydropower stations, and substations. The group of relay protection includes RPA cabinets, operational current cabinets, own-use cabinets, signaling and telemechanics cabinets. Reliable components ensure system faultlessness and durability. They are used effectively in the following applications: This equipment is ideal for both newly constructed. EP² provides complete power management systems for commercial and utility industries including control enclosures, protective relay panels, and control systems for power generation, transmission, and distribution. Protection relays in DC distribution panel assemblies are applied wherever continuity of service, selective tripping, and fault discrimination are critical across. The Rittal PDU (Power Distribution Unit) combines flexibility with reliability and is the perfect choice for power distribution requirements in your IT environment.
