

Replacing the wiring in the distribution box

Summary of Content

Replacing a distribution box wiring involves careful preparation, safe disconnection, proper installation, and precise wiring to ensure electrical safety and system reliability.

Preparation and Safety

- **Power Shutdown:** Ensure the main power supply is completely turned off. Use a multimeter or electrical tester to confirm no live current is present before starting any work .
- **Personal Protective Equipment (PPE):** Wear insulating gloves, safety glasses, and slip-resistant shoes to prevent electric shock or injury .
- **Tools and Materials:** Prepare screwdrivers, wire strippers, pliers, multimeter, insulation tape, cable ties, and replacement wires. Ensure the new distribution box and accessories meet electrical standards (UL/CE-certified) and are suitable for the load .
- **Site Assessment:** Choose a dry, ventilated, and accessible location away from water, flammable, or corrosive substances. Maintain enough space around the box for heat dissipation and future maintenance .

Removal of Old Wiring

- **Label Circuits:** Before disconnecting, label all existing circuits to ensure correct reconnection .
