

Revit Cable Tray Material Selection

Summary of Content

Cable tray materials in Revit can be assigned via Object Styles, and detailed material lists can be generated using Revit schedules or by downloading manufacturer-specific BIM families.

Assigning Materials in Revit

In Revit, cable tray materials are managed through Manage > Object Styles > Cable Tray & Cable Tray Fitting. Here, you can assign a default material for all cable trays and fittings in your project. Unlike duct or piping systems, cable trays do not have system-based material overrides, so differentiating materials for different tray types typically requires view filters or view templates to control color and appearance in plans, sections, and 3D views.

Generating a Material List

To create a material list or schedule for cable trays:

- Go to View > Schedules > Material Takeoff.
- Select Cable Tray as the category.
- Include fields such as Type, Material, Size, and Manufacturer.
- Apply filters if you want to separate trays by material or duty (light, medium, heavy). This schedule will provide a comprehensive list of all cable tray materials used in the project, which can be exported to Excel or PDF for documentation.

Downloadable Cable Tray Families

Several sources provide pre-built Revit families for cable trays:
