

Router Fiber Optic Broadband IP Settings

Summary of Content

To set your router IP address for fiber optic broadband, connect the router to the ONT, access the admin panel via a browser, and configure the LAN or WAN IP settings according to your ISP's instructions.

Connecting Your Router to Fiber

Most fiber connections use an Optical Network Terminal (ONT), which converts the fiber signal into Ethernet for your router. Connect the ONT to your router's WAN port using an Ethernet cable. Ensure the ONT is powered on and the status lights indicate a stable connection before proceeding .

Accessing the Router Admin Panel

- Connect your computer to the router via Ethernet or Wi-Fi.
- Open a web browser and enter the router's default IP address (commonly 192.168.0.1 or 192.168.1.1) in the address bar .
- Log in using the default credentials (often admin/admin).

Configuring the IP Address

Dynamic IP (DHCP)

- Most home fiber setups use DHCP, where the router automatically receives an IP from the ISP.
- Ensure the WAN interface is set to DHCP in the router settings .

Static IP
