

Router fiber optic cable with blue light

Summary of Content

A solid blue light on a router typically indicates an active internet connection, while a blinking blue light usually means the router is attempting to establish a connection.

Understanding the Blue Light

The blue LED on a router connected to a fiber optic network can have different meanings depending on the device and manufacturer. Generally:

- **Solid Blue Light:** Your router is successfully connected to the internet and functioning normally .
- **Blinking Blue Light:** The router is trying to establish a connection with the fiber modem or network . Some routers may use blue lights to indicate Bluetooth pairing mode or simply as a standard indicator for internet connectivity .

Troubleshooting Connectivity Issues

If your router shows a blue light but you cannot access the internet, consider the following steps:

- **Check Fiber Modem Connection:** Ensure the fiber optic cable is securely connected to both the modem and the router. Verify that the modem itself is receiving a proper fiber signal .
- **Restart Devices:** Power cycle both the router and the fiber modem. Unplug them for at least 2 minutes, then reconnect .
- **Hard Reset:** If restarting doesn't work, perform a hard reset on the router to clear caches and refresh settings. This returns the router to factory defaults, which can resolve configuration conflicts .
