

SC-LC Fiber Optic Adapter

Summary of Content

An SC to LC fiber optic adapter connects SC-terminated and LC-terminated fiber cables, ensuring precise alignment and reliable signal transmission.

Function and Design

An SC to LC adapter is a passive device that facilitates the interconnection between SC (Subscriber Connector) and LC (Lucent Connector) fiber optic cables. It contains a ceramic or plastic alignment sleeve that holds the fiber cores in precise alignment, minimizing insertion loss and maintaining signal integrity during transmission. The SC connector features a square shape with a push-pull mechanism, while the LC connector is smaller with a latch system, making the adapter essential for hybrid connectivity.

Types of SC to LC Adapters

- **Simplex Adapters:** Designed for a single fiber channel, ideal for point-to-point connections.
- **Duplex Adapters:** Support two fiber channels simultaneously, commonly used in high-density patch panels.
- **Hybrid Adapters:** Enable cross-connection between different connector types or genders, such as SC male to LC female, and are available for single-mode or multimode fibers.
