

Sc Fiber Optic Dual-Port Panel

Summary of Content

An SC Fiber Optic Panel Dual Port provides two SC connector ports for fiber termination, splicing, and patching, suitable for residential, commercial, and data center applications.

Overview

A dual-port SC fiber optic panel is designed to terminate and manage two fiber connections using SC (Subscriber Connector) adapters. These panels are commonly used for end-of-run fiber terminations, linking fiber drop cables to network equipment or optical network terminals (ONTs) in homes, offices, or data centers . They support both singlemode and multimode fibers and are compatible with SC/UPC or SC/APC connectors depending on the model .

Key Features

- **Adapter Ports:** Typically comes with 2 SC duplex or simplex ports, allowing easy connection of fiber patch cords .
- **Pigtails:** Pre-installed SC/UPC or SC/APC pigtails are often included, ready for splicing to incoming fiber cables .
- **Cable Management:** Dual-layer or slidable trays provide organized fiber routing, maintain proper bend radius, and allow slack management .
- **Enclosure:** Panels are made from high-quality plastics or metal, offering protection against dust and physical damage. Some models include removable protective hoods for added safety .
