

Selection Standards for Distribution Boxes in Madagascar-Bissau

Summary of Content

Low-voltage distribution boxes in Madagascar-Bissau should comply with IEC/NEC standards, local safety regulations, and proper voltage, current, and grounding requirements.

Regulatory and Standards Context

In Madagascar, the Bureau de Normes de Madagascar (BNM) is the national standards body responsible for developing and enforcing standards, including electrical and industrial equipment. BNM aligns its standards with ISO and IEC norms, ensuring that electrical installations meet international safety and quality requirements. While specific national standards for distribution boxes may not be publicly detailed, adherence to IEC 61439 (low-voltage switchgear and controlgear assemblies) and NEC guidelines is recommended for compliance and safety.

Key Selection Criteria

- Voltage and Current Ratings
- Ensure the distribution box can handle the expected load without overheating.
- Low voltage typically refers to systems up to 1000 volts, with industrial systems often using up to 600 volts.
- Short-Circuit Protection
- Use appropriate circuit breakers or fuses to prevent equipment damage and fire hazards.
