

Sifang Relay Protection Communication Interface Panel

Overview

SIFANG CSC-161 is a comprehensive transmission line protection IED for overhead lines, cables, or combinations. It offers a high level of sensitivity and reliability for various applications, including subtransmission and distribution networks. Page 3 Overview CSC-161 is selective, reliable and high Communication with station automation □ speed comprehensive transmission line system protection (Intelligent Electronic The IED provides a highly sensitive and Device) for overhead lines, cables or reliable distance protection with innovative. SIFANG, established in 1994 by Professor Yang Qixun, one of the first academicians of the Chinese Academy of Engineering, is a leading provider of advanced products and solutions for power system protection and automation. With a strong focus on energy and power sectors, SIFANG offers a diverse. Protection and Fault Information Management System (PFIS) collects all fault detail information automatically and systematically, creates fault report and provides operating advice of restoration operation. Meanwhile, The PFIS manages the setting, configuration and operation of the protection. CSC-211 Multifunction Protection IED is selective, reliable and high speed protection IED with rich functions to cover following applications: 1) Protection, bay control unit, MU (Merging Unit), and SCU (Smart control Unit) in one IED; 2) Work as feeder or capacitor bank protection IED; 3) Work as. CSC-237 multifunction motor protection IED supports IEC61850 standard communication and has interface which can connect with substation automation system and information management protection system; it provides the device description file (ICD file) that meets the requirements of IEC61850, and. Manuals and User Guides for SIFANG CSC-161. View online or download Sifang CSC-161 Product Manual.
