

Singapore Technical Support Micro Module Data Center IP54

Summary of Content

Micro modular data centers in Singapore with IP54-rated enclosures offer compact, weatherproof, and fully integrated solutions for high-density computing and edge deployments.

Overview of Micro Modular Data Centers

Micro modular data centers are rack-based, self-contained units that integrate all essential subsystems, including UPS, cooling, power distribution, fire protection, airflow management, and intelligent monitoring. They are designed for rapid deployment in limited spaces while maintaining high reliability and operational efficiency (Delta InfraSuite) . IP54-rated enclosures provide protection against dust ingress and water splashes, making them suitable for indoor and semi-outdoor environments .

Key Features

- **Integrated Power and Cooling:** Units include UPS systems, PDUs, and cooling solutions such as air-cooled or rear-door heat exchangers, ensuring stable operation even under high-density workloads .
- **Monitoring and Control:** Distributed control systems monitor temperature, humidity, lighting, and door access, with real-time alerts and mobile app integration for centralized management .
