

Small Distribution Box Mobile Distribution Box

Summary of Content

Small and mobile distribution boxes are compact, portable power distribution units designed for flexible, safe, and reliable electrical supply in construction, trade, and industrial environments.

Overview

Mobile distribution boxes, also known as mobile distributors or PDU (Power Distribution Units), are designed to make electrical power quickly and easily available anywhere. They are particularly useful on construction sites, in trade operations, for operational maintenance, or for large-scale temporary electrical supply . Small distribution boxes are a compact variant, ideal for limited space or smaller setups, while still providing robust and reliable power distribution .

Key Features

- **Construction and Materials:** Many mobile distribution boxes are made from solid rubber or impact-resistant polyamide, providing durability and protection against physical damage . Some models use vulcanized butyl rubber for added resilience .
- **Portability:** Compact designs often include side handles or optional hanging brackets, making them easy to transport and install .
- **Protection:** Boxes are typically IP44 rated, offering splash-proof protection suitable for outdoor or industrial environments .
