

Specifications and Models of Concealed Electrical Boxes

Summary of Content

Concealed electrical boxes are designed to safely house wiring and devices within walls, available in metal or PVC, with precise dimensions, material grades, and compliance with NEC and UL standards.

Material and Series Options

Concealed boxes are typically manufactured from metal or PVC. Metal boxes are often made from ISI-grade galvanized steel or GPSP (Galvanized Plain Skin Pass) steel, with thicknesses ranging from 0.8mm (Eco Series) to 1.0mm (Elite Series) for enhanced corrosion resistance and durability . PVC boxes are made from 100% virgin PVC, offering resistance to moisture, UV exposure, and corrosive environments . Metal boxes are grounded and bonded to maintain electrical continuity, while PVC boxes are non-conductive and lightweight .

Dimensions and Internal Volume

The internal volume of a concealed box is critical for safety and code compliance. Standard wall boxes are sized according to the number of devices (gangs) and depth requirements. For example, a single-gang metal box typically provides 14-20 in³, with deeper versions recommended for GFCIs, dimmers, or smart switches . Multi-gang boxes increase in width with each additional device, and ceiling or junction boxes are designed based on structural load and fixture type rather than gang count .
