

Specifications and Models of Vertical Distribution Boxes for Construction Sites

Summary of Content

Vertical distribution boxes for construction sites are pre-wired or customizable electrical enclosures designed for safe, temporary power distribution, typically made from durable thermoplastics or technopolymers with IP65-IP67 protection.

Key Specifications

- **Material:** Most construction site distribution boxes are made from technopolymer, thermoplastic, fiberglass, or polyester, often with fire-resistant backrests or internal steel doors for added safety and durability .
- **Current Ratings:** Available models typically range from 32A to 400A, with options for single-phase or three-phase connections .
- **Protection Ratings:** Boxes are designed to withstand harsh environments, with IP65 to IP67 ratings for dust and water resistance, and IK08 to IK10 for impact resistance .
- **Mounting Options:** Can be wall-mounted, floor-mounted, or installed on supports, allowing flexible deployment on construction sites .
- **Pre-Wired vs Customizable:** Many models come pre-wired for quick installation, while others allow custom layouts for inputs, outputs, switches, protection devices, and connectors .
- **Safety Compliance:** Compliant with IEC 61439, EMC, RoHS, and other relevant safety standards .
