

Specifications of Mexican Stainless Steel 304 Cable Trays

Summary of Content

Mexican stainless steel 304 cable trays are corrosion-resistant, durable, and suitable for chemical, food, and saline environments, with versatile installation options and standardized dimensions.

Material and Corrosion Resistance

Mexican 304 stainless steel cable trays are manufactured using AISI 304 stainless steel, providing excellent resistance to corrosion in highly aggressive environments such as chemical plants, food processing facilities, and coastal areas with saline exposure (Tecnotray) . The wire mesh construction ensures lightness while maintaining structural integrity, and the smooth, rounded edges prevent cable damage and installer injuries . Some trays also use Type 316 stainless steel for welding hardware and rungs to enhance corrosion resistance in extreme conditions .

Construction and Design

- **Wire Mesh Trays:** Typically feature large mesh openings (e.g., 2" wide by 4" long) for easy cable routing and ventilation, preventing dust accumulation .
- **Ladder Trays:** Consist of two longitudinal side rails with transverse rungs welded at standard spacings of 6, 9, or 12 inches, capable of supporting concentrated loads up to 200 lbs per rung with a safety factor of 1.5 .
- **Solid or Ventilated Bottoms:** Some prefabricated trays, like Atkore Trof, offer solid or ventilated bottoms welded to side rails for secure cable routing and heat dissipation .
