

Specifications of cable trays for tunnels in Afghanistan

Summary of Content

Cable trays for tunnels in Afghanistan are typically made from galvanized steel, stainless steel, or fiberglass, designed for fire resistance, corrosion protection, and flexible installation in complex tunnel geometries.

Materials and Types

Cable trays used in tunnels are manufactured from galvanized steel, stainless steel (AISI 304 or 316), and fiberglass-reinforced polyester (GRP) to ensure durability and corrosion resistance in harsh environments . Common types include:

- Cable ladders: Provide high mechanical strength and allow easy cable installation and maintenance .
- Perforated trays: Promote airflow to prevent overheating and support medium to low voltage cables .
- Wire mesh trays (Cablofil): Offer flexibility for bends, slopes, and complex tunnel layouts .
- GRP trays: Halogen-free, self-extinguishing, and suitable for fire-sensitive areas .
