

# Standard Wiring Method for a 12-Channel Distribution Box

## Summary of Content

A 12-channel distribution box is wired by connecting the main supply to a main MCB, feeding an RCCB for leakage protection, and distributing power to 12 individual MCBs with proper neutral and earth connections.

### Components Overview

A typical 12-channel distribution box includes:

- Main MCB (Double Pole): Acts as the main switch and overcurrent protection.
- RCCB/RCD: Provides protection against earth leakage and electric shock.
- 12 Output MCBs (Single Pole or Double Pole): Protect individual circuits from overload and short circuits.
- Neutral Bar: Distributes neutral to all outgoing circuits.
- Earth Bar: Connects all protective earth wires and links to the main earth pit.
- DIN Rails: For mounting MCBs and RCCBs.
- Busbars: For phase distribution if required .

### Wiring Sequence

- Incoming Supply: Connect the phase (live) and neutral from the utility or main isolator to the main MCB.
