

Suitable clips for fiber optic cables

Summary of Content

Fiber optic cables require specialized clips that secure, organize, and protect cables, available in nail-in, clip-on, adhesive, and metal fire-resistant types.

Types of Fiber Optic Clips

1. **Nail-In Clips** These clips are installed by nailing into walls, ceilings, or baseboards. They are suitable for indoor and outdoor use and come in sizes such as 6mm and 8mm diameter holes, accommodating fiber optic cables along with RG59, RG6, CAT5, and CAT6 cables. They are typically spaced every 12-18 inches for secure routing and organization . 2. **Clip-On or Adhesive Mount Clips** Clip-on clips can be easily installed or removed without tools, and adhesive-backed versions allow mounting on smooth surfaces. They are designed to hold multiple cables of varying diameters, such as 2.9mm, 3.4mm, 3.9mm, 4.5mm, 5.5mm, and 6mm, making them ideal for telecommunication cabinets, data centers, and industrial applications . 3. **Hammer-On Beam Flange Clips** These clips attach to flanges or beams using a hammer-on method. Made from spring steel, they provide a quick and durable solution for hanging fiber optic cables and other hardware, suitable for structural applications . 4. **Fire-Resistant Metal Clips** For compliance with safety standards like BS7671 and BS6701, metal cleats are recommended. Firefly Push Grip clips and metal cleats are corrosion-resistant, fire-safe, and designed to replace plastic clips that may melt in high temperatures. They support small cables (0.9mm, 2.0mm, 3.0mm) and are installed using fast-fix concrete screws .

Key Considerations

- **Cable Diameter:** Choose clips that match the fiber optic cable size to prevent stress or damage.
