

Suriname Attached Optical Cable

Summary of Content

Suriname's optical cables are connected through a combination of international submarine systems and domestic fiber networks, linking the country to regional and global internet hubs.

International Submarine Connections

Suriname is connected to multiple subsea fiber-optic cables that provide high-capacity international connectivity. Key systems include:

- **Deep Blue One:** Operational since August 2024, this 2,250 km submarine cable links Suriname with French Guiana, Guyana, and Trinidad & Tobago, delivering up to 25 Tbps of capacity .
- **EllaLink Caribbean Gateway:** Suriname joined this high-capacity transatlantic system, providing direct connectivity to Europe, Brazil, and the United States. This cable enhances redundancy, reduces dependency on a single route, and offers low-latency access to Tier-1 data centers .
- **Americas II and Suriname-Guyana Submarine Cable System (SGSCS):** These older systems connect Suriname to the Caribbean and North American networks, with terrestrial extensions linking local networks to the international backbone .

Domestic Fiber Network

Within Suriname, Telesur has been the primary driver of fiber deployment:

- **The National Broadband Project,** completed in 2019, extended fiber to urban areas, offering residential plans with speeds ranging from 50/50 Mbps to 200/200 Mbps .
