

TP-Link PoE Switch Interface

Summary of Content

TP-Link PoE switches provide both managed and unmanaged interfaces, supporting web-based management, traffic monitoring, and automatic PoE power allocation for connected devices.

Interface Overview

Managed TP-Link PoE switches like the TL-SG105PE and TL-SG105MPE offer a web-based user interface that allows users to monitor network traffic, prioritize ports, and manage PoE power allocation. The interface provides features such as:

- Network monitoring to observe traffic behavior and device status .
- Traffic prioritization and QoS to optimize multimedia delivery, such as IPTV .
- Automatic PoE management, including detecting required power for each device, rebooting unresponsive devices, and cutting power to lower-priority ports when total PoE consumption exceeds the switch's budget .
- Compatibility with Omada Cloud SDN for centralized management of multiple switches in larger networks . Unmanaged TP-Link PoE switches like the TL-SG1005P or LS108GP provide a plug-and-play interface, requiring no configuration. They automatically supply power to PoE devices and support standard Ethernet connections for non-PoE devices .

PoE Standards and Port Features

- 802.3af (PoE): Supplies up to 15.4 W per port.
- 802.3at (PoE+): Supplies up to 30 W per port, suitable for IP cameras, access points, and VoIP phones .
