

TP-Link Three-Line Access Switch

Summary of Content

TP-Link three-line access switches provide flexible, multi-port connectivity for small to medium-sized networks, with options for PoE, fanless operation, and both rackmount and compact deployments.

Overview and Features

TP-Link Access Series switches are designed for cost-effective deployment in small and medium-sized businesses. They are available in rackmount and compact models, making them suitable for offices, classrooms, hotels, or hospitals . Many models support Power over Ethernet (PoE), allowing devices like IP cameras, VoIP phones, or wireless access points to receive power directly through the Ethernet cable. Fanless variants are ideal for noise-sensitive environments .

Connectivity and Ports

A typical three-line access switch provides three Gigabit Ethernet ports, enabling simultaneous connections for multiple devices. This setup is useful for connecting computers, smart TVs, NAS devices, or gaming consoles without requiring additional switches . Some TP-Link devices, like the TL-PA8033P Powerline adapters, combine three Gigabit ports with HomePlug AV2 MIMO technology, allowing network extension over existing electrical wiring while maintaining high-speed connections up to 1300 Mbps .
