

Telecom Fiber Optic Cable Pole Installation Costs

Summary of Content

Aerial fiber optic cable installation on poles typically costs between \$3 and \$7 per linear foot, plus \$50–\$150 per pole span for hardware.

Cost Breakdown

Cable Costs: Self-supporting aerial fiber optic cables generally cost \$3–\$7 per linear foot installed, depending on cable type, length, and project complexity . **ADSS (All-Dielectric Self-Supporting)** cables, which do not require a messenger wire, may be slightly higher due to precise tensioning requirements . **Pole Attachment Hardware:** Each span between poles requires hardware such as brackets, clamps, and messenger wires if applicable. This typically adds \$50–\$150 per span . **Labor Costs:** Experienced aerial crews can install fiber faster than underground crews, but labor still varies based on terrain, pole height, and safety requirements. Safety training, fall protection, and certified flaggers in urban areas can increase labor costs . **Permits and Regulatory Fees:** Urban or municipal projects may require permits, traffic control, and coordination with other utilities. Permit fees can range from \$50 to several hundred dollars per project, depending on local regulations . **Additional Considerations:**

- **Project Complexity:** Longer spans, multiple poles, or difficult terrain can increase costs.
- **Cable Type:** Single-mode fiber is common for long-distance links, while multi-mode fiber is used for shorter runs; this affects material costs.
