

Temporary cable trays for electrical wires

Overview

Temporary wire mesh or basket cable trays, alongside more heavy-duty ladder trays for permanent installations, are used to safely manage and organise power, lighting, and communication cables across the site, minimising trip hazards and adapting to evolving layouts. They are typically made of metal, such as steel or aluminium, and are designed to provide a safe and efficient way to route and protect. The E-Line TLS series Wire Mesh Cable Tray systems allow easy cable exit through the spaces in the mesh structure—downward, to the right, or to the left. These trays are available in stainless steel or electro-galvanized coatings. Compatible with a full range of clamps and ceiling suspension. Global Recycled Standard (GRS) certified products contain recycled content that has been independently verified at each stage of the supply chain, from the source to the final product and meet social, environmental, and chemical requirements. What are the types of cable trays?

Ladder Cable Tray: Ladder cable trays have a ladder-like design with horizontal side rails connected by rungs. Organize your network, power, and data cables efficiently.
